

L80 2 48 SURFACE FOILER

VOORWOOD'S L80 2 48 SURFACE FOILER A high speed heat transfer foil laminator. The L80 applies dry transfer finishing foils to the surface of most medium density fiberboard (MDF) and other substrate. It comes equipped with two heated foil applicator stations, which are incorporated in a heavy-duty machine frame for durability and precision. The electronic control panel includes visual heat monitors for each station. Other controls such as laminator pressure, start/stop and film tension are also located on this panel. It accommodates boards up to 48" wide, increasing efficiency and reducing material handling.
