

L85 Surface Foiler

The L85 Surface Foiler uses dry transfer finish technology. The L85 applies a transfer finish on panels up to two feet in width. You can finish doors, cabinet side panels, furniture tops and many other products.

Another exciting feature of foil finishing with the L85 is the ability to finish over routed or embossed designs. Because the transfer finish adheres only to those areas that contact the applicator rollers, the recessed areas of a design do not receive the finish.

When the part exits the L85, the intricate details of the design are clean with no trimming required. This means that the appearance resembles a hand carved part. As soon as the foil finish is applied, your products are ready for immediate processing.

L85 SPECIFICATIONS

Part Width: **4" to 24"**

Part thickness: **1/4" to 2-1/2"**

Electrical: **230 volt-60 hz-3 ph or 380 volt-50 hz-3ph**

Production: **1500 sq. ft. hour**

Floor Space: **50" x 44"**

MADE IN USA
