

The Voorwood L86 Surface Foiler

Foil Finishing for Flat Surfaces without Pollutants, Trimming or Clean Up

The Voorwood **L86** uses zone heated ovens and twin applicator rollers to quickly apply dry transfer finish. Rotary powered precleaner brush removes dust and debris. Sectional ovens heat only the part being run which means reduced energy consumption and extended roller life. Pneumatic unwind assembly and contoured bow roller remove wrinkles and help ensure a smooth even finish.

Maximum Width	36 Inches	Maximum Thickness	2.5 Inches
Maximum Speed	50 Feet/Minute	Minimum Thickness	0.125 Inches
